ABOUT TEA POWERED PROJECTS

Tea Powered Projects is a design, development and hosting company based in Nottingham, UK. Every project we build has the same attention to detail. We ensure they are secure, reliable and easy to manage, no matter how complex the task.

We aim to provide you with a solution that not only helps you generate profit, but one that is a tool for your business to save money. We do this by not only understanding what your goal is, but also look to integrate other areas of your business to help streamline your process.

As a company, we understand that business is no longer 9-5, so we make sure we are available at all times of the day. Being available helps us support larger organisations as well as hobbyists wanting to turn a side hustle into a full-time job.

ABOUT THE FOUNDER - CALLUM ROBLEY

I am a full-stack developer and designer. I have been working in the industry since 2007. I started writing websites in 2003 using Macromedia Dreamweaver. I loved the accessibility of the web. My main projects were small websites and making tweaks to PHPBB forums, then writing themes and modules.

After I left school in 2008, I joined an international engineering company (Langley Holdings PLC) in the marketing Department. After 2 years of digital and print design, I asked to create a bespoke Content Management System (CMS) for their house building company. Afterwards, I built a new CMS that hosted eight companies websites simultaneously. During it's six year implementation it grew, with the addition of five more sites and thousands of more pages. At the beginning of 2020, I launched the current version of the CMS. This version contains all 18 of their sites, over 10,000 pages and over 7000 images and documents. It supports all languages and localisations.

Throughout this period, I was also working on various side projects for clients and myself. These projects include adverts, leaflets, brochures, games, mobile app and websites. These experiences allowed me to develop new skills that have brought me to where I am today.

SERVICES

GRAPHIC DESIGN AND BRANDING

If you are a startup wanting to add a more professional touch to your company, or an enterprise with existing guidelines, needing an advert or business card, we can help. With lots of experience in both the print and digital sectors, we can provide a uniform package.

- Logos & Corporate Identity
- Brochure Design
- Business Cards
- Printed and Digital Adverts
- Web Site Designs
- Application Designs

DEVELOPMENT

With over 13 years in the development industry, we have undertaken every kind of development project. For each project, we ensure that they are secure and reliable.

- Full Stack Responsive Website Development
- Bespoke Content Management Systems
- ERP Systems
- API Integrations
- Mobile Application Development
- Desktop Applications

HOSTING AND ARCHITECTURE

Whether you have a small Word Press site that keeps going down, or large applications, we can design and implement a reliable fault-tolerant solution for you. We passively monitor all our projects to ensure they are kept secure and fast.

- Website Hosting
- Database Hosting
- Network Design and Implementation
- Game Server Hosting
- Server Backups and Monitoring

IT SUPPORT

Computers and servers are a pain and sometimes don't work. We provide IT support on all levels, from removing viruses to computer upgrades and procurement. If you have problems with software or hardware, we can help.

- Virus Removal
- Computer Upgrades
- Software Installation and Upgrades
- Software Debugging
- Hardware Installation and Upgrades

SOFTWARE & LANGUAGES

There are so many great software packages and programming languages, each with benefits. We pride ourselves on staying up to date with the latest software and trying out new products to help expand our product base. Here is a list of a lot of the products we may use to solve your problem. If you require something not on the list don't worry! We have probably used, tried and tested it.

Design, Photography and Videography

Server and Devops

Frontend Development

Backend Development

OUR PROCESS

Here is our tried and tested workflow. Each step will need to be signed off before going on to the next.

PHASE 1 - *Project Brief*

A 30-minute to an hour in-depth consultation. The purpose, to gather as much information about your business needs and aims. Afterwards, we will get to work preparing a proposal ready for you to sign off.

PHASE 2 - *Wireframe and Scope-of-Work*

Once you have accepted our proposal, we will develop the wireframes for your website or application, as well as an in-depth development brief. We usually do this via video conference. Afterwards, we will follow up with an email outlining everything we discuss.

PHASE 3 - *Frontend Design*

Before we get to the complex task of backend development, we like to ensure the frontend is what you expect. You will now start to see your project come to life.

PHASE 4 - *Backend Development*

If you have any dynamic elements or integrations, we will build them in this step, the longest part of the process. We will always keep you updated via email, just to let you know how you are getting on.

PHASE 5 - *Showing the world*

Finally, we will make your website live! If it's to be hosted by us, it's a simple process of updating your DNS. Otherwise, we can either upload it to your designated host or send you the final code.

Don't worry. Even after the project is complete, we will keep in contact. After things have settled down and you are enjoying your new website, we will check in to make sure everything is working okay.

OUR WORK

Our clients range from multi-national industrial enterprises to hobbyists that sell products they make at home. We have experience in many sectors, from housebuilding to power protection; Printing to tutoring. Here you can find a select few projects we have had permission to show.

ON THE GO CYCLE REPAIRS

SERVICES

Branding
Logo
Business Card Design
A5 Leaflet
Email Hosting
Online Presence Campaign

ABOUT

On the Go Cycle Repairs is a **bicycle repair business** based in Skegness. Started from the owner's shed, as demand grew, he found more customers struggled to get the bike to his location as it was their primary means of transport. So he brought a van and now offers "road-side" repairs and collection services and wanted a brand to match. Our goal was to **create a unique identity** to match their brand. We designed the **logo, brand guidelines, social banners, business cards and work wear**. We also created all of their online presence accounts and provided them with a **social media "play book"** to give them ideas and advice on creating content.

HUMANATEES HOME TUTOR

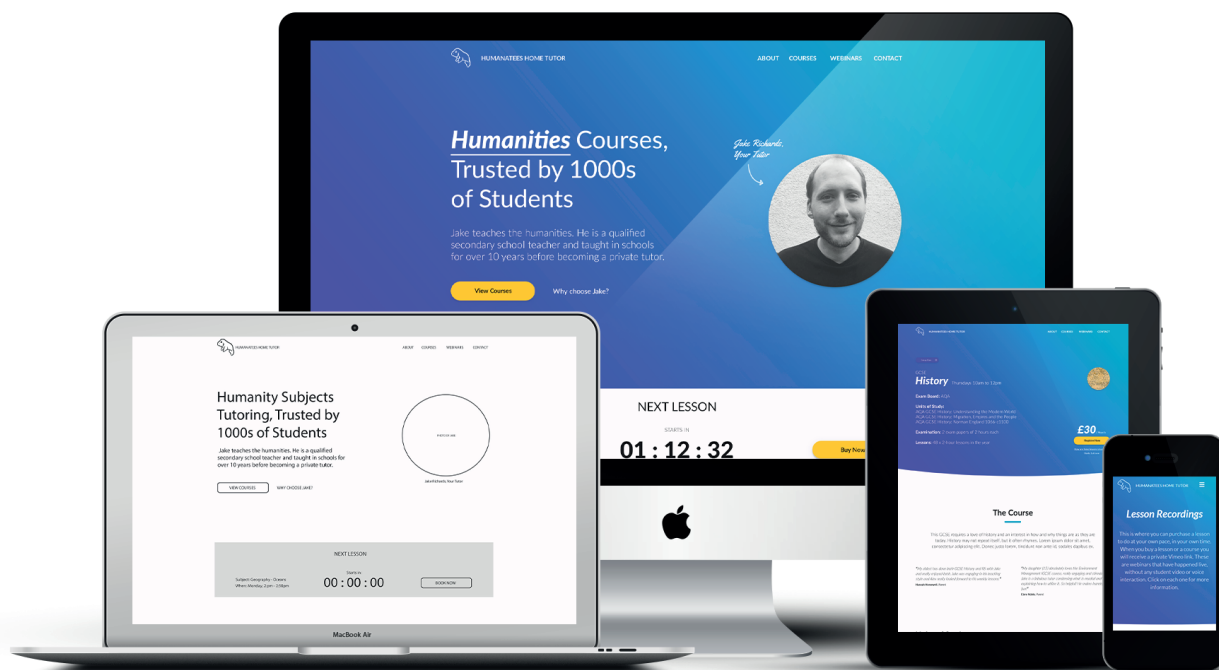

SERVICES

Website Design
Bespoke E-Commerce
Bespoke CMS Development
Web Hosting
Email Hosting

ABOUT

Humanatees Home Tutor (HHT) is a home educating, family run business started in 2017. HHT was created by a qualified secondary school teacher who taught in schools for ten years before becoming a private tutor. After having issues with previous hosts, HHT was looking for a new modern, friendly-looking website without the hassle of handling their hosting and domains. They had experience with website builders but ultimately wanted an easy-to-use CMS to manage their ever-growing list of courses. After discussing their process, we implemented a Bespoke On-Demand Video E-Commerce to replace third-party applications, saving time and fitting the same style website.

COOKIE CULTURE

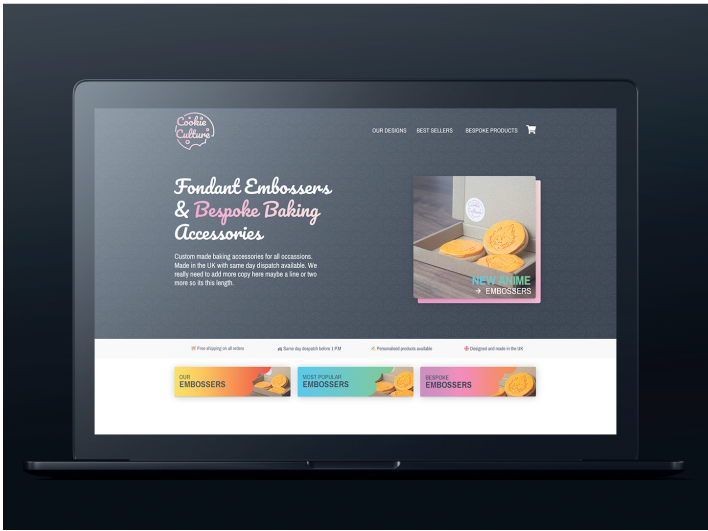

SERVICES

- Branding
- Website Design
- Bespoke E-Commerce
- Bespoke CMS Development
- Web Hosting
- Email Hosting

ABOUT

Cookie Culture is an online 3D printing company that creates custom made baking accessories for all occasions. Cookie Culture specialises in creating cookie embosser stamps for fondant icing around niche cultures and interests. Our goal was to create a unique identity with a website to match their brand image. We designed the logo, brand guidelines, social banners, business cards and options for different style packaging. Being part-time, the challenge was to ensure that the website was easy to manage. To assist, we also integrated the Etsy API and Notion API to help manage the stock levels and integrate with their existing production workflow.
